I'd like to clarify that I did not ask for a translation. My question was specifically to ask if someone knew whether there was a way to install a non-English language pack in Assassin's Creed Revelations. The reason I didn't just Google it myself, was because I didn't want to waste any time, but I did find it interesting that not a single result returned in Google, even if I used other search engines than Google. I'm on the PC version, but I'm also using Japanese language pack, so it is not exactly relevant. I checked through the local files and saw that there was a text.xml file in there, so I tried creating a new xml file with different language in the same folder and restarted the game, but I just get the game in English. Yeah I did, I'm looking for the translations for the english subtitles, the only other place I see these is on the AC multiplayer forums, and I didn't want to waste time figuring out how to translate them to another language. I just want to install a language pack, the non-english language pack for the AC Revelations. You have to have the global manager installed, which is pretty standard with any game on PC. Thanks! But if the global manager is installed, why isn't there a way to install a language pack? I mean, don't you think that with so many downloads that it has to be some kind of feature? Also, you're right about the AC World-Server, there were no subtitles, so I think I found the problem, but I'm confused on how to fix it. I made a new xml, but after restarting the game it still says the game is in English. I will admit that I have played AC Revelations with the global manager, and it worked fine for me. Also, 82157476af
