Ping Manager Crack+ 2022 [New]

Ping Manager 1.0 is a network tool built for helping users perform ping operations for viewing the round-trip time, and sent and received packets. It sports a clean and straightforward layout that allows you to ping multiple IP addresses at the same time. The program gives you the possibility to specify the host name, number of retries, and delay time between retries. Among the best features bundled in tool is the automatic mode which lets you ping certain IP addresses at a specified time (a single task at a certain date and time, or every hour, day, week, or month), and select the program to be executed when running a ping operation. What's more, you can view details about the IP address, sent, received, and lost packets, and other details as well. Other notable characteristics enable you to start or stop the ping process, ping a range of IP addresses simultaneously, resolve host names, and show replies. Last but not least, you can make the program run at Windows startup, automatically save data to CSV or plain text file format by specifying the saving directory, and perform traceroute and path ping operations. The tool has a user-friendly interface that is really simple to follow. We have found out that the program performs tasks quickly and with no errors, even though we have been unable to test the overall performance of the program. It is worth noting that the entire process of performing ping operations may not be a quick process due to the fact that it is dependent on the speed of the network connection as well as the number of IP addresses. Despite the fact that we have noted the aforementioned, we have found Ping Manager to be an easy tool that is perfectly suitable for the casual user who needs to have a simple, effective, and intuitive interface to quickly perform ping operations.
